**FORTERRA**

**Achieving the warmth, comfort and rich aesthetics of masonry has never been easier. VersaThin from Forterra Brick is a genuine clay thin brick that can be easily installed onto practically any substrate. Our products have been used on all types of projects from interior design upgrades to exterior commercial applications in the harshest climates. If you are considering a thin brick masonry solution, look to VersaThin brand from Forterra Brick.**

## thinner, lighter weight walls

VersaThin is 3" thinner and 70% lighter than dimensional brick. Therefore, it can reduce foundation and wall structure costs and/or increase your wall's r-value by incorporating more insulation in the wall system.

## genuine clay thin brick

Produced from the same shale and clay as Forterra's dimensional brick, VersaThin gives you the same strong, traditional and comforting appearance as brick. There are many concrete thin brick, quarry tile thin brick and faux thin brick on the market, but there is only one VersaThin.

## diverse color line

VersaThin is produced in 12 different plants across the US and Canada, and is available in over 200 colors and textures ranging from white to black in both residential and commercial expressions.

## multitude of texture options

Our diverse texturing capabilities are a key reason many designers choose VersaThin. Choose among smooth, velour, wire cut, tumbled, rolled, sanded, and many other textures to meet your project's desired feel.

## 36 colors in stock

For the first time, we offer 36 standard colors in stock for immediate delivery.

## compatible with every thin brick system

VersaThin is available in TBA, TBS and TBX grades. Therefore, our material can be installed using any field applied or panelized system on the market today.

### Suggested applications

#### Interior applications like:

corridors, conference rooms, foyers, backsplashes, laundry rooms or a garage makeover.

#### Exterior applications like:

residential face-lift, commercial remodel, corporate rebranding, any new construction, any type of panelized construction.

## Installation System Options

VersaThin has a variety of applications including do-it-yourself projects to enhance your home, panelized construction for high rise structures, commercial face-lifts or to cover an unsightly 'foundation wall.

VersaThin can be used with any of today's popular installation methods, including:

**Thickset System** - Applying metal lath and a mortar scratch coat over plywood and building wrap sheathing. Most popular exterior application.

**Thinset Mortar** - or tile set method - Cement backer board is used as the substrate and VersaThin is applied using a thin set mortar. This system is a great option for both interior and exterior applications.

**Metal Support System** - Pre-engineered systems that can reduce your labor and provide exacting brick coursing.
